Please amend the claims as follows:

1. (Twice Amended)   A data processing system for evaluating treatment of chest pain patients in a medical facility, the system comprising:

   means for entering chest pain patient treatment information <u>for a plurality of patients</u>;

   means for storing the chest pain patient treatment information <u>for said plurality of patients</u>;

   [means for retrieving the chest pain patient treatment information;]

   means for comparing the chest pain patient treatment information <u>collectively for said plurality of patients</u> to predetermined values, to evaluate the treatment received by <u>said plurality of</u> chest pain patients; and

   means for reporting the comparison of the chest pain patient treatment information <u>for said plurality of patients</u> to the predetermined values to evaluate the treatment received by <u>said plurality of</u> chest pain patients, so that the medical facility is able to improve its treatment of <u>future</u> chest pain patients.

5. (Twice Amended)   A data processing method for evaluating treatment of chest pain patients in a medical facility, the method comprising:

   entering chest pain patient treatment information <u>for a plurality of patients</u>;

   storing the chest pain patient treatment information <u>for said plurality of patients</u>;

   [retrieving the chest pain patient treatment information;]
